

3rings plug

the plug that cares

If you are worried about your ageing mum or dad each day then the 3rings plug may help you and your family.

Just plug a kettle, TV or almost any appliance into your 3rings Plug and tell us when you want us to check that your ageing Loved Ones are OK.

For example, check mum makes her morning cup of tea between 5am and 9am.

If everything is OK then all the family can get comfort messages directly to their smart phone, tablet or computer or more importantly alerted if no activity has been detected.

No Internet is needed at Mum or Dad's house as the 3rings plug has its own mobile device built into it. The 3rings plug delivers a simple safety net for the times you cannot be there.

How it works

Just plug a kettle, TV or almost any appliance into your 3rings plug. You and your family will get daily reassurance that your loved ones are OK, direct to your smartphone, tablet or email.

When your Loved Ones turn on the appliance connected to the 3rings plug it lets the 3rings Portal know using its in-built 'mobile phone'.

The 3rings Portal 'listens' for activity based upon the event rules and times you set.

You and your family are notified that everything is OK or alerted if no activity has been detected.

Note: The plug needs a reasonable mobile signal to operate, if you cannot make a call on your mobile from your loved ones home then the plug may not work.
