

Product information - trueCall Call Blocker

| | |
|--------------------------|---|
| Short description | trueCall Call Blocker – No more nuisance phone calls |
| Long description | <ul style="list-style-type: none">• Blocks unwanted calls but lets through calls from friends and family• Track all your phone calls online• Easy to use – learns as it goes along• In independent trials trueCall blocked 98% of nuisance calls – three times as many as the next best blocker• Highly configurable• Works on all home phone lines – including those with broadband• As seen on Dragons’ Den! <p>We all get nuisance calls and they always arrive at the most inconvenient time. trueCall’s multi award winning Call Blocker is like having a home receptionist who lets calls from your friends and family straight through but intercepts and checks all other callers. You only speak to people you want to – it stops telemarketers, robocalls, PPI calls, international call centres, scam calls, silent calls, calls at night, pranks, malicious calls, wrong numbers ...</p> <p>You can choose how Call Blocker handles different types of incoming call. As standard, it will intercept unrecognised callers and ask them to say their name (most telemarketers hang up at this point and you aren’t disturbed). It then puts the caller on hold and rings your phone. When you pickup, trueCall announces who the caller is, and you can choose whether to accept the call, reject the call (and block all future calls from that number), or send the caller to the built in answering machine.</p> <p>trueCall Call Blocker is easy to set up – you just plug it in and it quickly learns who you like to speak to and who you don’t. If the standard call handling profile doesn’t quite meet your needs there are four others to choose from, and you can even fully customise your own unique Profile to give you the greatest flexibility and control. You can choose how you want each type of call to be handled - International calls, calls from businesses, calls from mobile phone, etc. You can choose to send the caller directly to trueCall’s built-in voicemail, play them the unobtainable tone, ask them to enter a code to get through to you, or just let them hear the ringing tone (while your phone is silent!). What’s more, you can choose different call handling rules for daytime and night-time.</p> <p>For example, if you are receiving calls from international call centres you can get trueCall to ask all international callers to enter a two digit code – this stops the call centres, but allows your friends and family who live abroad to get through.</p> <p>It doesn’t end there - you can optionally manage and control your trueCall unit online through your personal Internet Control Panel. View a log of all your incoming and outgoing calls, edit your trusted callers list and change your configuration settings. Online access is free for the first year then £20 pa.</p> <p>With the optional Call Recorder memory card you can record incoming and outgoing phone calls and play them back on your PC.</p> <p>Let trueCall Call Blocker handle your calls while you get on with your life.</p> <ul style="list-style-type: none">• Personalise your greeting and Zap message• Easy to install – just plug it in between your phone and phone socket• Compatible with pendant alarm systems• Up to 1,000 numbers on your block list• Up to 1,000 numbers on your friends and family list• Use your existing corded or cordless phone – works best with a multi handset |
